

BLOW MOLDING MACHINE

Fully Automatic Multi-layer Blow-molding Machine

1. Automatically remove excess materials, highly efficient, stable and energy-saving.
2. Double stations, single die-head, 2 productions of 25L chemical barrel with handle in 45s.
This kind of machine is produce 15L-25L product.
Double stations, three die-heads, 6 productions of 4L oil bottle with handle in 27s.
This kind of machine is produce 3L-5L product.
Double stations, six die-heads, 12 productions of 2.2L soy sauce pot with handle in 18s.
This kind of machine is produce 1L-2.5L product.
3. Cooling after secondary period so molding cycle is shortened.
4. Automatic wide mouth cutting and leak detection, effectively improve product quality and reduce labor costs.
5. Multilayer coextrusion design (new materials in inner and outer layer; old materials in middle layer), greatly reduce the costs of raw materials and masterbatches, conformed to food grade packaging requirements.
6. Finished conveyor convergence to export packing, improve high degree of automation to save labor costs, exactly meet your needs in modern enterprise competition.

PLASTIC MACHINERY CO., LTD.

Sheng Mei Plastic Machinery Co., Ltd. was set up in Dongguan, China in 1998 as the branch of a Taiwan-based company operating since 1977 to meet ever-increasing market demand and take advantage of the economic boom in China.

Model number 210, 210A , 210B are suitable for producing popsicle containers, toys, small size screw neck bottles , small size bottles

This model is specially designed with accumulator head configuration for producing PE barrels with capacity of 10 to 75 liters

ouble mold-carriage is designed in single to octonary-die-head blow molding machines, fully automated with safety lock specially for high throughput production of various kinds of containers
