*Founded in 1999, COOLBIT produces mainly air-to-water heat exchangers widely used in solar-powered generators, engineering vehicles and industrial equipment as hydraulic systems, as well as aluminum finned heat exchangers. Differing from conventional counterparts that are effective only with lower-HP hydraulic systems, our air-to-water coolers are developed with modern technologies to prove relatively more efficient.*

Oil Filter (molf 5)

Automatic Reverse-washing Filter (rf4)

Dual-function Cooler for Hydraulic System
