

Heavy-duty pallet racking is the most popular racking, it provides 100% retrieval access and improves good retrieval efficiency. Pallet racking system is the ideal solution in areas where space is limited which takes up 33%~40%.

The push-back racking allows pallets of varying types and sizes to be stored together, two, three or even four deep, with quick and easy access. Pallets are loaded in sequence onto wheeled carriers or cradles of varying heights which are 'pushed back' on inclined steel channels to utilize the full depth of the racking. All pallets loading on every level are readily available at the face of the rack. This type of racking is well suited to the task of bulk storage and bulk handling without first-in-first-out access.

<http://m.cens.com/s/taijinn>

Tai Jinn was established in 1968 and led by Mr. Chung Shin Tsai. At the primitive stage, a wide variety of stainless hardware accessories and portable tool case were exported to American and European markets. In 1987, Tai Jinn cooperated in a technical partnership with the German company, Wilhelm Bott GmbH & Co. KG, to produce heavy-duty cabinets for industry purposes. Since then, Tai Jinn has expanded its business into the storage equipment manufacturing field.
