*Initially a full subcontractor in Taiwan, we have gathered years of experience in product processing, manufacturing and innovation, fully equipped with CNC processing machines, milling machines, lathes, and multi-tasking CNC lathes. Having started to offer bicycle parts and components in 1987, we are developing wide-ranging bicycle repair tools and related components, which is the key to develop our latest product—recumbent trike. With a small but efficient R&D team, we welcome buyers worldwide to contact us for further info!*
