We started off back in 1994 as a simple trader of computer components such as CPU, hard drives, CD ROMs, and of course memory modules. As we progressed we eventually dropped off other items and focused on our main product; memory modules in latter part of 1990s. At the time we offered variety of major international brands such as Samsung, Hynix, Micron, Elpida, Spectek, Nanya, etc. At the turn of 21 century we had begun to conduct OEM works for a number of lesser known customized OEM brands. Up to this very day we are still conducting OEM production works for a number of OEM clients around the world and we cherish our mutual close relationship.
