CSBC wins Taiwanese government's tender for development of a homegrown submarine (photo courtesy of UDN.com).

CSBC of Taiwan Wins Gov't NT\$2.6 Bn. Tender for Submarine Development

By STEVE CHUANG

With the Taiwanese government intending to developing homegrown military weapons to reduce dependence on outsourcing and nourish the domestic defense industry, CSBC Corp., Taiwan, a government-linked shipbuilding company by size on the island, has just won a government tender valued roughly NT\$2.6 billion for the development of submarines.

President F.L. Chen of CSBC noted that completing the tender requires considerable manpower and financial resources involved, but is expected to generate only paper-thin profits.

However, from another point of view, Chen stressed that garnering the tender, whose closing date is set on December 22, 2019, has made his company qualified to build submarines to be ordered by Taiwan Navy in the future. Presently, headed, CSBC is Taiwan's only shipbuilder with experience in making military and specialty vessels, hence enjoying a leading status locally.

In the Taiwanese government's NT\$2.591 billion tender for research and development of a homegrown submarine with deadweight ranging 1,500 to 2,000 tonnes, CSBC outbid two

local peers, namely Ship and Ocean Industries R&D Center, a Taiwanese government-funded marine industry research institute, and Ching Fu Shipbuilding Co., the biggest private shipyard on the island.

In fact, CSBC already set up the Submarine Development Center of CSBS on August 1, 2016, to echo the Taiwanese government's calls for the development of homegrown submarines and pay the way for itself to vie for Taiwan Navy's orders in the future. Initially, the center employs scores of experts and skilled engineers at home and from abroad, mainly engaged in producing designs of submarines and military and specialty vessels.

In the face of a persistent market recession of bulk shipping and sluggish demand for container carriers, Chen indicated that CSBC has actively explored new businesses, including the support of national defense, to stay buoyant. Over the past decade, the firm has produced a total of 116 units of various military vessels ordered by Ministry of Defense, including missile boats, frigates and transport ships. [CENS](#)

ELEM Technology Co., Ltd.

Auto and motorcycle parts, optical and optoelectronic parts, precision parts processing

ELEM Technology Co., Ltd., established in 1988 in Changhua County, central Taiwan, is a world-caliber manufacturer of precision parts and components for wide ranging applications, as well as an assembler and precision-processing service provider, whose superior production techniques and troubleshooting capability that facilitate R&D for new products, as ordered by customers and carried on in-house, are well recognized by internationally prestigious firms.

The versatile company is capable of making metallic parts, optical instrument parts, bicycle parts, auto parts, motorcycle parts, lens parts, camera parts and electronic parts and high-precision parts for the aerospace industry. Also, this manufacturer handles orders on an OEM (original equipment manufacturing) basis. While ELEM's products are mostly exported to Southeast Asia and North America, the firm's manufacturing service is also widely accepted by such globally known firms as Taiwan's Asia Optical and Japan's Olympus.

ELEM's current achievements in the contract manufacturing sector owe mainly to its outstanding production capability, achieved by decades-long dedication to continuous improvements. Through the steady efforts on R&D of manufacturing technology and techniques, the firm has ample know-how about problem solving, which is aptly used to not just enhance production efficiency, but help customers with troubleshooting when developing new products.

Also contributing to ELEM's high-efficiency manufacturing capability is its full line of production equipment employed in-house, including CNC machining centers, CNC turning machines, milling and grinding machines, all of which are periodically maintained and calibrated to ensure original condition and performance.

Moreover, ELEM is remarkable for its insistence on offering customers reliable quality. To that

end, the manufacturer carries out rigorous quality control throughout production at its factory, also adopting a full line of quality inspection instruments such as 3D and 2D projectors, an advanced internal diameter measuring system, surface roughness testers, micrometers and many others, in its QC laboratory. The steady investment in QC lays the foundation for the maker to stand out in the increasingly competitive market.

Caption: ELEM specializes in making a broad array of metallic parts and components for wide ranging applications.
