

## Premium Rack & Pinion Boots

### Boot Kits and Accessories

# RELIABILITY AND QUALITY THAT SET THE STANDARD

## INTRODUCTION

Not all boots are made the same. Years of testing and fine-tuning has given LFI the experience and expertise in the formulation of materials and manufacturing of rubber and neoprene-based boots and bellows. This proprietary material is what makes the difference and sets our boots apart from the competition. No more cracks, premature tears and other problems

### Ordering Information

Boot number used in this catalog start with a letter 'R' followed by four identification numbers

### Product Packaging

Rack & pinion boots are packaged in quantities of either 100 bulk boots per cases or in a kit format with two polyethylene clamps/ties. Simply supply the LFI boot number when ordering. Rack & pinion boot kits are coded with a letter 'K', while bulk boots start with a letter 'R'. For example:

K2001 - denotes a R2001 rack & pinion boot packaged in kit boxes clamps included.

## RP BOOT PRIMER

The rack & pinion and power steering boot has a critical function in the steering assembly: it is there to protect the assembly from dirt and road debris. Failure of the boot results in premature failure of the unit, thus many consider it the weakest link in the assembly.

There are basically five major properties to look for in a boot. These are:

**TENSILE STRENGTH** - Indicates how strong the material is, and how well it will stand to wear and abuse in extreme driving conditions.

**TEAR RESISTANCE** - Better tear resistance will mean less tendency for a small split in the material to open up.

**OZONE RESISTANCE** - Ozone is generated in the engine compartment and will attack boot materials, making them crack and lose their tensile strength.

**RESILIENCE** - Rubber materials will deform, and some more permanently than others. Good boots return to their original shape quickly.

**COLD TEMPERATURE RESISTANCE** - Physical properties such as tensile strength, tear resistance, and even resilience are affected by temperature. During extreme cold temperature conditions, the boot material may weaken and more likely to be damaged. The properties above are only a portion of the requirements a boot should meet. SAE J2028 is the recognized standard for testing the physical properties and performance of CV boots and can be applied to the rack & pinion boot for comparison purposes. A detailed test report based on the SAE J2028 standard is available from LFI upon request.
